

# Community Health Assessments

CMOR has nearly **20 years of experience** in conducting Community Health Assessments for health departments across Ohio. CMOR has served health departments of all sizes and demographics.

CONDUCTING A  
**COMPREHENSIVE  
COMMUNITY HEALTH  
ASSESSMENT**

**IS AN ESSENTIAL FIRST  
STEP IN COMMUNITY  
HEALTH IMPROVEMENT!**

*“The Carroll County  
General Health District has worked  
with CMOR for two consecutive CHAs.  
They are very easy to work with,  
accommodating for survey  
development and prompt in their turn  
around time. They can provide you a  
turn key assessment or allow you to do  
components of the assessment that  
can be incorporated into the final  
report.”*

Kelly A. Morris, MPH, BSN, RN  
Carroll County Health Commissioner

## **CMOR'S CHAS HELP YOU:**

- Maximize resources by focusing on priority health issues
- Identify underserved populations
- Inform population health strategies
- Create an action plan that captures measurable outcomes
- Compare your community to others
- Develop and strengthen long-term, collaborative partnerships

# OUR APPROACH

CMOR customizes each assessment based on the client's unique needs and the community's unique characteristics. In addition to reviewing current CHA outcomes and CHIP priorities and objectives, there are several potential data collection components of this project including:

## Community Survey

A representative, random sample household survey of county residents.

## Secondary Data

Reviewing and analyzing secondary data sources to identify priority areas of concern when analyzed alongside survey data.

## Community Partner Survey

A web survey of community/organization partners who have knowledge of the health needs of the community, particularly with vulnerable populations.

## Youth Survey

A youth survey of middle and high school students in the county.

## Focus Groups

Focus groups of community members or other key stakeholder groups.

## Call to Action

CMOR can facilitate a meeting of community partners and other key stakeholders to review assessment results and prioritize needs

Analysis for the CHA includes survey data in conjunction with health and demographic data. Using all data available, CMOR identifies priority community health needs for the county.

## Why CMOR?

- Customized survey instruments
- High Quality Data
- Breadth of experience
- Proven, effective Methodology
- On-going Support
- Cost efficient
